Modelio 3 - Issue #181
Workspace conflict with eclipse

03 March 2014 12:04 - Thomas Ellinger

Status:	Assigned		**Start date:**	03 March 2014
Priority:	Medium		**Due date:**	
Assignee:	Cédric Marin		**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:	Modelio 3.2			

Description

OS: Linux Mint 13 (32-Bit)Modelio Version: 3.1.0 (32 Bit)Eclipse Version: Kepler SR1Java: OpenJDK, Version 1.6.0_27

Modelio workspace path: /home//modelio/workspaceEclipse workspace path: /home//workspace (eclipse’s default)

In the environment described above, it is not possible to use eclipse and modelio at the same time. Only one either or is possible (even though they are using different workspace paths).When I quit eclipse and launch modelio, a message box appears:

“This workspace was written with a different version of the product and needs to be updated.

/home//workspace/

Updating the workspace may make it incompatible with other versions of the product.Press OK to update the workspace and open it. Press Cancel to select a different workspace."

Why does modelio complains this path, which is not the workspace path I selected?

Even if I launch modelio with -workspace /home//modelio/workspace the behaviour is the same.

Remark: I just noticed that the issue tracker did remove < and > chars my paths in the issue description. So here it is again correctly formatted:

- OS: Linux Mint 13 (32-Bit)
- Modelio Version: 3.1.0 (32 Bit)
- Eclipse Version: Kepler SR1
- Java: OpenJDK, Version 1.6.0_27
- Modelio workspace path: /home/<user>/modelio/workspace
- Eclipse workspace path: /home/<user>/workspace (eclipse's default)

In the environment described above, it is not possible to use eclipse and modelio at the same time. Only one either or is possible (even though they are using different workspace paths). When I quit eclipse and launch modelio, a message box appears:

This workspace was written with a different version of the product and needs to be updated.

/home/<user>/workspace/

Updating the workspace may make it incompatible with other versions of the product. Press OK to update the workspace and open it. Press Cancel to

select a different workspace.

Why does modelio complains this path, which is not the workspace path I selected?

Even if I launch modelio with -workspace /home/<user>/modelio/workspace the behaviour is the same.

- Status changed from New to Assigned

#4 - 08 July 2014 15:50 - Philippe Vlaemynck

- Assignee changed from Christophe Malgouyres to Cédric Marin

- Target version set to Modelio 3.2

#5 - 23 October 2014 15:18 - Brian Sipos

I have a work-around to this issue on my system; I created a wrapper shell script containing:

```
#!/bin/sh
STARTDIR=$HOME/modelio
if [ ! -d "$STARTDIR" ]; then
mkdir "$STARTDIR"
fi
pushd "$STARTDIR"
/usr/lib64/modelio/modelio
popd
```

This just sets the working directory to be something other than $HOME so that the default workspace upon startup is $HOME/modelio/workspace instead of $HOME/workspace.
