<b>Target version:</b>			
<b>Description</b>			
<p>Export and import a UML when uml model contains DATA MODEL</p> <p>When user models a diagram, and models an Entity under Datamodel package. When user exports the model as UML and tries to import it back to Modelio, Entity properties like Entity Name, Persistent Name etc. Also initially in Entity user did not model any getter setters, but all those are automatically generated.</p> <p>Please find attached snapshots: beforeExp.PNG : Persistent Diagram before exporting to UML afterImp.PNG : Persistent Diagram after importing to UML</p> <p>For any clarification Please feel free to contact me.</p>
