

Modelio 3 - Issue #343

Other internal events than do/exit/entry for states in state chart diagrams

13 April 2018 11:59 - Arne Reith

Status:	New	Start date:	13 April 2018
Priority:	Medium	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Modelio 3.7.1		
Description			
<p>in Modelio 3.7 it's only possible to create internal auto transitions from kind do/entry/exit. It would be great to have to possibility to add own events like</p> <p>entry / dothis()myown / dosomething()exit / dothat()</p> <p>Perhaps it is possible to change the selectbox in the property window for property &ldquo;Received Event&rdquo; into a combobox (overwriteable)</p> <p>Please see also: https://www.modelio.org/forum/7-general-help/3985-creating-internal-transitions-other-than-entry-exit-do.html</p>
