

Modelio 3.x, 4.x - Issue #310

There is no way to update the signature of an operation in a derived class

15 June 2017 18:55 - John Wood

Status: New	Start date: 15 June 2017
Priority: Low	Due date:

Target version:	
Description	
<p>Assume a function has been implemented as abstract in a base class, and the derived class implements that function. If the operation's signature changes in the derived class the modeler (I assume the modeler properties is the place similar to an interface) should allow a property to update the implemented function. Manual entry is error prone.</p>
